

Access Management Cover Letter

6132 Taneka LandingWalshville, AZ 48306

Dear Greer Beer,

In response to your job posting for access management, I am including this letter and my resume for your review.

Previously, I was responsible for technical and operational guidance to less experienced members of the team, support organization and other NXP organizations about NXP IAM solutions in the Active Directory space.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Hands-on experience and expert level knowledge of CyberArk's Privileged Account Security or equivalent solutions
- Technology access management, security, risk, and audit experience
- Experience working with FIM and OAuth
- Experience with the implementation lifecycle of IAM products, both open and closed source
- Experience with Java or J2E-based applications and working with SailPoint, CyberArk, and similar vendors
- Experience in multi-platform environments
- Experience with key aspects of access management design, installation, integration, customization, and operation
- Knowledge of PIV frameworks and integration with large scale and distributed enterprises

Thank you in advance for reviewing my candidacy for this position.

Sincerely,

Emery Kris
