

Example of Account Engineer Job Description

Powered by www.VelvetJobs.com

Our innovative and growing company is looking to fill the role of account engineer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for account engineer

- Prepare complete Tooling Package and Tooling Solution Proposals, including technical recommendations, time studies, standard tool assembly specifications and engineering tooling questions
- Spindle troubleshooting and problem resolution
- Evaluate current and prospective distributors in the territory
- Interact regularly with key stakeholders
- Maintain regular contact with assigned authorized distribution to promote and encourage the sale of Coromant products
- Continuously research the cutting tools market, specifically competitor activity, and make recommendations to management
- Engage with our customers in the Swiss market to understand business needs
- Lead functional teams for new product introduction
- Support on investment project definition and execution
- Lead of major projects include external contact to authorities and coordination of external engineering companies

Qualifications for account engineer

- Prior experience in Account Management or Technical Sales
- Experience with scripting languages (Python, Lua)
- Experience working with distant and international teams
- Experience testing native multimedia software, across a range of platforms

- Ability to create test plans and define test cases from established project requirements, functional and design specifications
- Experience using software test tools and knowledge of how to properly interpret their results
