Our company is searching for experienced candidates for the position of UX architect. To join our growing team, please review the list of responsibilities and qualifications.

Responsibilities for UX architect

- Qualified candidate may eventually lead a small team of user experience designers
- The User Experience Architect reviews the initial requirements and assists in identifying various usage scenarios and underlying user and business needs
- Conduct competitive audits, documenting detailed user experience specifications for highly interactive interfaces
- UX/IA Designer Job Description
- Demonstrable passion for researching and designing great information architectures
- Ability to communicate well with stakeholders, team mates, and users
- A high-level understanding of current relevant technologies and ability to quickly comprehend the fundamentals of new technologies and how those might influence requirements, design approach, and product innovation
- Comfortable working as part of a design and development team, not just working from a technology perspective
- Deep empathy with users, understanding that people will expect a humane, usable, and successful user experience required functionality and features
- Flexible and adaptable in approach to fit project budget and timelines

Qualifications for UX architect

- Proven experience as an information architect / interaction designer and successful track record of taking projects from concept to final delivery

- Bachelors degree in Interaction Design or related field, or 1+ years professional experience in designing for enterprise web applications
- Experience with content management systems and social networking platforms and an understanding of the content marketing space and search engine optimization (SEO) preferred
- Lead the interaction design phase from the sketching of key functional concepts through to wireframes and rapid prototypes in a fast paced and exciting environment
- Plan and execute research activities as required to help ensure solutions are insight driven and truly user-centric
