

Agile Developer Cover Letter

564 Zboncak Plaza South Marthfort, AL 23398-6824

Dear Riley Thompson,

In response to your job posting for agile developer, I am including this letter and my resume for your review.

In my previous role, I was responsible for expert level system analysis, design, development, implementation, and testing of data-centric applications in a Mainframe environment.

My experience is an excellent fit for the list of requirements in this job:

- Working knowledge of HTML, CSS and at least one leading Javascript framework
- Experience developing and/or support global, large scale business applications
- Experience building / maintaining a continuous delivery pipeline
- E- Deep understanding of agile methodology and tools (including Atlassian tools stack - JIRA, BitBucket, Confluence)
- Working knowledge of C#, HTML5 and Typescript/JavaScript
- Working knowledge in relational database design and SQL
- Working knowledge in Object Oriented design principles and patterns
- Gain experience in communication and technical skills working with Product Experts and other Agile Developers

Thank you in advance for taking the time to read my cover letter and to review my resume.

Sincerely,

Stevie Schulist
