

Assistant, Engineering Cover Letter

921 Predovic Mountain Port Dorlaton, RI 04560

Dear Armani King,

In response to your job posting for assistant, engineering, I am including this letter and my resume for your review.

In my previous role, I was responsible for technical support to System Operations, System Reliability, Distribution Planning, System Protection, and Power Quality departments.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Experience in EPSON/ABB robotic will be an advantage
- Possess basic/good knowledge in vision systems will be an advantage
- Help with developing high-bandwidth, low latency FPGA-based designs, including RTL coding, synthesis, timing analysis, simulation, verification and lab test and debug
- Work independently and as part of a team daily to achieve project and business objectives
- Hardware circuits including DACs, ADCs, microprocessors, memories, DSPs, linear and switching voltage regulators
- Computer or engineering training or technical background
- Knowledge and skills in computer applications such as, Microstation, Autocadd, Alchemey, Sag 10, Vibrec, Adobe, PowerPoint, Excel and Word
- Computerized Management Maintenance Systems experience - such as SAP or Maximo

Thank you in advance for taking the time to read my cover letter and to review my resume.

Sincerely,
