

AWS Architect Cover Letter

174 Runte CovesSouth Ellyhaven, KY 23554-9035

Dear Lennon Connelly,

I submit this application to express my sincere interest in the AWS architect position.

In the previous role, I was responsible for in-depth domain expertise and promote AWS Cloud best practices to project technical staff and/or DHS client management.

My experience is an excellent fit for the list of requirements in this job:

- Has knowledge of commonly-used concepts, practices, and procedures through automation tools
- This individual will consult with other team members and use prior expertise with AWS/Azure to extend an existing framework of automation across new and existing application environments
- Creating business cases for transformation and modernization, including analysis of both total cost of ownership and potential cost and revenue impacts of the transformation
- Process analysis and design, with a focus on identifying technology-driven improvements to core enterprise processes
- Maintain deep knowledge of the market for cloud services, enterprise applications, business process management, advanced analytics, and integration software
- Develop alternate technology solutions blueprint (cloud-based computing, storage,) to build case for legacy technology modernization
- Develop recommendations for operating model development to implement transformation initiatives
- Proven experience building security reference architecture for all-in cloud deployments and/or hybrid scenarios

Thank you for your time and consideration.
