

# Backend Developer Cover Letter

77979 Gutkowski BypassLake Kasandra, NY 33129-8691

**Dear River Doyle,**

Please consider me for the backend developer opportunity. I am including my resume that lists my qualifications and experience.

In the previous role, I was responsible for broad full stack developer support, implement relational databases, configure and deploy applications to user environments, build dynamic software application backend systems, and support and implement a VMWare environment network.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Experience with cloud technologies and containerization (AWS, Docker)
- Development experience of writing multi-threading highly scalable components
- Development experience in Cross platform libraries
- Strong commercial background in object oriented design
- Good understanding of network protocols and web based technologies (HTTP, HTTPS, TCP/IP, REST, TLS)
- Experience with proxies
- Enjoys fast paced environments with a focus on rapid delivery in an Agile environment
- Clear record of achievement and a willingness to work hard and persevere to make things happen

**Thank you in advance for reviewing my candidacy for this position.**

Sincerely,

Corey Jerde
