

# Developer Lead-Java Cover Letter

2016 Spinka PineCristburgh, CA 48008-5980

**Dear Reese Cummerata,**

I submit this application to express my sincere interest in the developer lead-java position.

In my previous role, I was responsible for engineering and SME services for cyber, RF, intelligence surveillance and reconnaissance, and software engineering and software analysis utilizing Waveform Virtualized modems as a validation analysis tool.

My experience is an excellent fit for the list of requirements in this job:

- Familiar with the principles of performance tuning databases and application code
- Modern design techniques and idioms
- Design/development of large scale systems
- Expert in Application Development Tools, Techniques and Standards
- Experience with Continuous Integration/Continuous Delivery environment, utilizing automated testing, Test Driven Development
- Excellent track record of application product development and delivery of complex global projects, preferably in the financial services domain
- Experience with analysis, design, development and support of multi-tier desktop or server side distributed applications written using any of these technologies
- Development experience in Java/Scala (Windows / Linux environment)

**Thank you in advance for taking the time to read my cover letter and to review my resume.**

Sincerely,

Stevie Deckow
