

# Developer Lead-Java Cover Letter

907 Rich Shores Hammesmouth, TN 81733

**Dear Hayden Weimann,**

Please consider me for the developer lead-java opportunity. I am including my resume that lists my qualifications and experience.

In the previous role, I was responsible for software security engineering direction, guidance and analysis for the problem management process, including assessing and evaluating system anomalies during outage escalations or other events.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Experience with NoSQL databases (Cassandra, Mongo, Elasticsearch)
- Experience with message queues and asynchronous systems
- Experience with unit testing and tools such as JUnit, Mockito, or Spock
- Experience with continuous delivery and associated tooling (Ansible, Jenkins, Terraform)
- Experience with micro service or event driven architectures
- Experience with Docker, Linux and shell scripting
- Experience with Avro
- An understanding of distributed systems and data consistency

**Thank you in advance for taking the time to read my cover letter and to review my resume.**

Sincerely,

Greer Batz
