# Development Test Engineer Cover Letter

94505 Emard DamMarvinshire, NC 76213-9009

**Dear Jordan Kertzmann,**

I would like to submit my application for the development test engineer opening. Please accept this letter and the attached resume.

Previously, I was responsible for cybersecurity support for development facilities and laboratories; supporting Agile software development, code review, and testing.

My experience is an excellent fit for the list of requirements in this job:

- Experience developing automation test frameworks and testing tools in Java or C#/C++ (as opposed to writing automated tests for an existing framework, such as JUnit/Selenium)
- Proficiency with open source automation tools (Selenium, Cucumber, Gherkin) in a Test Driven Development (TDD)/Behavior Driven Development (BDD) style approach
- Assist in coding an automated framework in a TDD/BDD style approach
- Experience with build tools (Maven)
- Experience with scripting in languages (Python, UNIX)
- Experience with SCM solutions such as (Git, GitLab)
- Programming knowledge with C#, C/C++, and Python
- Optional) Experience with web development

**I really appreciate you taking the time to review my application for the position of development test engineer.**

Sincerely,

Oakley Kessler
