

# Engineer Lead Cover Letter

70881 Williamson TrailFetown, ME 46648

**Dear Marion Zieme,**

I submit this application to express my sincere interest in the engineer lead position.

Previously, I was responsible for technical leadership, guidance and direction to Application Architects, Database Administrators, Programmer/Analyst(s) supporting application design, database architecture and design and overall application and service architecture functions in client agencies.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Knowledge of agile development techniques such as TDD, BDD, Pair Programming, Refactoring, Continuous Integration
- Deep knowledge of test methodologies and debugging
- Knowledge in any of these Test Automation Tools, Robot, JMeter, SOAPUI, webDriver, Selenium
- Experience testing large structured data sets and systems
- Experience in installing and maintaining gas mechanical and/or electrical equipment
- Knowledge of Education premises
- Employment subject to enhanced DBS clearance
- Developing services such as REST, SOAP and API services

**Thank you for considering me to become a member of your team.**

Sincerely,

Tatum Bode
