

# Industrial Design Cover Letter

705 Carlos Junctions West Benito fort, PA 23791

**Dear Casey Haley,**

I am excited to be applying for the position of industrial design. Please accept this letter and the attached resume as my interest in this position.

Previously, I was responsible for expert design research advice on projects across a range of scales, working with a mix of in-house teams, design agencies, or software vendors and integrators to ensure the best possible experience.

Please consider my experience and qualifications for this position:

- CAD skills are essential, although training will be given and pure Mechanical Engineering students with less CAD experience shouldn't be put off!
- An understanding of the injection moulding process and tooling would be beneficial although not a requirement
- Proven expertise in customer/design research, product design and development (preferably w/med device background), and problem definition and concept development
- Excellent communicative skills – written, graphic and verbal
- MS Design Management
- Experience in Design for Six Sigma methods and process
- Proven experience “experiencing” customers, users and patients in clinical environments
- Good knowledge in Adobe CC (at least Adobe Illustrator)

**Thank you for taking your time to review my application.**

Sincerely,

Story Weimann
