

# IT Security Cover Letter

525 Corrinne PortCandelariachester, DE 62411-4277

**Dear Rory Champlin,**

In response to your job posting for IT security, I am including this letter and my resume for your review.

In my previous role, I was responsible for second level engineering support for trouble ticket/problem resolution for security/authentication technologies/infrastructures; provides problem definition and resolution using existing procedures; may develop and enhance security engineering procedures.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Palo Alto experience preferred!
- Fundamental experience in COBIT, ISO 27001, PCI or other industry standard security frameworks
- Any experience with forensics software and forensic analysis is highly preferred
- Demonstrated technicality across a range of security disciplines
- Proficient Microsoft Office and computer skills including internet research
- Basic understanding of access control, databases, networking, operating systems, application types, network security, and application security
- Very computer literate
- Strong experience with security tools used to find security vulnerabilities

**Thank you in advance for taking the time to read my cover letter and to review my resume.**

Sincerely,

Peyton Nitzsche
