

Metrology Technician Cover Letter

562 Sipes Parkways Pollichborough, AK 84166

Dear Denver Jenkins,

In response to your job posting for metrology technician, I am including this letter and my resume for your review.

In my previous role, I was responsible for robot specific or systems training in an informal environment to customers as required and should have knowledge of PLC (Programmable Logic Controllers) communications and other robotic peripheral equipment.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Experience working within a Biopharmaceutical Facility or equivalent is preferred
- Instrumentation Technical Training Certificate (CCT / ISA / PMEL / TMDE) or equivalent preferred
- Current Good Manufacturing Practices (cGMP) experience
- Low Voltage Electrical Safety Training (NFPA-70E) is preferred
- This role is a good way to gain additional hands on experience in an advanced manufacturing environment
- Opportunity to expand electrical knowledge, skills, and abilities
- Experience and knowledge for measuring and inspection instruments (roughness / profile tester, optical comparator)
- High School Diploma or military training in metrology/calibration

I really appreciate you taking the time to review my application for the position of metrology technician.

Sincerely,

Rowan Schroeder
