

Middleware Administrator Cover Letter

7157 Effertz GlensDarlineland, KS 24710

Dear Campbell Pollich,

I submit this application to express my sincere interest in the middleware administrator position.

Previously, I was responsible for server support for the WestRock IT support infrastructure encompassing virtual and physical Windows and Linux operating systems.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Good knowledge on upgrading EJB and Java Versions
- Installed V5.1 Cumulative fix for WebSphere HTTP plug-in & V5.1.1
- Well experienced in configuring Resources like JDBC Provider, Creating Virtual Hosts, Shared Libraries, JNDI Configurations, EJB References, Creating Environment Variables, and Configuring Session Management
- Migrated existing applications from JBoss 5.x to 6.x and 6.x to 7.x on windows and AIX/Linux
- Experience in problem tracing, log management, scripting to invoke problem-determination actions involving traces and thread dumps
- Deployment and Troubleshooting of JAR, WAR and EAR applications in clustered environment with WebLogic, WebSphere and JBoss
- Expertise in writing UNIX/LINUX scripts to build JAR, WAR and EAR files
- Experience with WebSphere scripting using wasadmin, JACL/Jython (recycle the application server, deploy customer applications, log rotation, monitor applications state, etc), LINUX/UNIX shell scripts for deployment automation, monitoring, startup and shutdown

Thank you in advance for taking the time to read my cover letter and to review my resume.
