

# Operational Engineer Cover Letter

115 Jeramy Plains East Kirbyton, SC 46475

**Dear Peyton Reynolds,**

In response to your job posting for operational engineer, I am including this letter and my resume for your review.

Previously, I was responsible for technical support and enhancement of automation related systems (PLC / HMI / VFD / Instrumentation / Data and Voice Networks / plant electrical distribution systems) and implements required updates to avoid technical obsolescence.

Please consider my experience and qualifications for this position:

- Strong competency in both written and spoken English Strong proficiency in both written and spoken English
- Master Black Belt / Lean Master is an advantage
- Prior management experience in a Manufacturing environment
- Strong working knowledge with statistics, quality systems and regulatory requirements
- Good understanding of cGMPs, industry and regulatory standards and guidelines of Pharmaceutical and Medical Device preferred
- Skilled in use of virtualization platforms (VMWare)
- Skilled in configuration management platforms (Puppet, Chef, Ansible, Salt)
- Executes assigned projects to support the site's strategies and key objectives

**I really appreciate you taking the time to review my application for the position of operational engineer.**

Sincerely,

Royal Breitenberg
