

Project Architect Cover Letter

622 Marks Springs Connellyville, ND 61805

Dear Sutton Fay,

Please consider me for the project architect opportunity. I am including my resume that lists my qualifications and experience.

Previously, I was responsible for advanced level technical support to BGIS/NOC/ATS/BRT with site-specific info, on local network architecture, building & equipment standards and building prioritization.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Strong Corporate Workplace market Interior Design experience
- Knowledge of project and delivery process including project management, staff planning & budgeting
- Expertise in building construction, building codes, Title 24/California codes, ADA, LEED and other jurisdictional requirements
- Track project financials
- A typical day offers tremendous opportunities to design and lead small to mid-size architecture projects or to collaborate as part of a larger team executing large, complex designs
- Our culture encourages engagement and continuity through all phases of a project, from programming/concept design through construction phase services
- Revit knowledge experience preferred
- Coordinating with other project discipline engineers

Thank you for considering me to become a member of your team.

Sincerely,

Corey Hegmann
