

QA / QC Engineer Cover Letter

52524 Miller Points Boyerstad, WY 94953

Dear Morgan Mante,

In response to your job posting for QA / QC engineer, I am including this letter and my resume for your review.

In my previous role, I was responsible for advice to Project Manager, Resident Engineers and direction to the Construction Supervision team of Engineers and Inspectors for the supervision of the construction of the works.

My experience is an excellent fit for the list of requirements in this job:

- Control & Safety Valve Product knowledge
- Knowledge of product related codes and standards, ASME, ANSI
- Knowledge of API 6A and API Q1
- Knowledge of inspection techniques (sample plans)
- Professional membership, if any would be considered additional qualification, but not mandatory
- Demonstrable track record in the delivery of large show room and/or commercial projects encompassing high side and low side MEPF works
- Strong experience in software test procedures to build, execute, and record tests
- A good working knowledge of submarines / surface ships in both structural applications and pipe systems, with a bias towards structural welding applications, on all vessel types and facilities

Thank you for taking your time to review my application.

Sincerely,

Tyler Walsh
