

Senior Automation Engineer Cover Letter

8251 Senger Ridge Robertview, WA 46336

Dear Landry Rempel,

I am excited to be applying for the position of senior automation engineer. Please accept this letter and the attached resume as my interest in this position.

Previously, I was responsible for hands-on PLC/DCS/BMS/HMI/SCADA programming services including development work for integration of new systems and upgrade of existing systems.

My experience is an excellent fit for the list of requirements in this job:

- Define test cases, implement and execute them using manual and automation tools
- Accurate recording and reporting of software defects and retesting of resolved issues
- Deliver test reports documenting the results of the testing process
- Evaluate and confirm externally reported software failures in production
- Participate in the quality assurance community of practice, sharing and adopting better techniques and technology
- Working as a software tester in an agile environment
- Clarifying detail as the project progresses, working closely with the product and development teams to ensure that the software is right first time
- Design and develop test scripts for testing (performance, stress and security testing), including analysis and delivery of results

I really appreciate you taking the time to review my application for the position of senior automation engineer.

Sincerely,

Campbell Witting
