

Senior Automation Engineer Cover Letter

549 John Road Lennyport, NH 88264-3142

Dear Robin Rippin,

I submit this application to express my sincere interest in the senior automation engineer position.

In my previous role, I was responsible for first level support and expert knowledge in assay automation and process optimization to scientist teams on highly automated robotic systems as well as standalone laboratory equipment.

Please consider my experience and qualifications for this position:

- Install and configure virtual host servers supporting all locations in the Americas region
- Assist with the implementation and support of performance management and trending/analysis of hosting platform services
- Utilize and update all documentation in accordance with governance requirements
- Continually develop expertise of software and hardware technology that is the responsibility of Virtual and Cloud technology team
- Strong infrastructure automation and orchestration skills with tools such as vRealize Orchestrator (vCO)
- Proficient with scripting/programming languages such as Perl, Python, Java Script, PowerCli
- Experience with Configuration management automation platforms
- Experience consuming REST API services

Thank you for considering me to become a member of your team.

Sincerely,

River Rolfson
