

# Senior Software Engineer, UI Cover Letter

476 Welch WellNew Korey, CT 68350

**Dear Lennon Kiehn,**

In response to your job posting for senior software engineer, UI, I am including this letter and my resume for your review.

In my previous role, I was responsible for escalation assistance to the rest of the org interacting with customers and frequently interacts directly with customers resolving complex technical problems.

My experience is an excellent fit for the list of requirements in this job:

- Knowledge of how to future-proof sites for HTML5 and CSS3, knowledge of how to add modern-day techniques to display in older browsers
- Command of architecture standards, principles, design patterns, and methodologies
- Working knowledge of ancillary technologies/tools (portal/portlet development (Liferay), BPM, rules engines, security/SSO, and UML) is preferred
- Excellent communications, team leading, and technical mentoring skills are necessary
- Performance tuning and capacity planning experience is preferred
- Experience with relational database systems (SQL Server)
- Knowledge of Backbone.js, CoffeeScript and Node.js are nice to have
- Strong working knowledge of one JavaScript MVC framework like Angular2.js (preferred), Ember.js, Knockout.js

**Thank you in advance for taking the time to read my cover letter and to review my resume.**

Sincerely,

Blake Kuhlman
