

# Senior Specialist Developer Cover Letter

166 Edmond SummitFayside, KS 53974

**Dear Casey Goyette,**

Please consider me for the senior specialist developer opportunity. I am including my resume that lists my qualifications and experience.

In my previous role, I was responsible for routine feedback to the marketing team related to technology and customers needs that would be important for new product development or current product enhancement.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- In depth knowledge of T-SQL and PL/SQL including the recent language and database features added in the latest versions of SQL Server and Oracle
- Experience working with large databases (millions of rows per table)
- Experience troubleshooting performance problems from both database and hardware standpoint
- Knowledge of .NET (specifically C#) development
- Knowledge of Crystal Reports/SSRS
- Experience with Android development including Android Studio, Gradle, and related technologies
- Expert in the application lifecycle in global environments
- Solid track record of writing system design or application lifecycle

**I really appreciate you taking the time to review my application for the position of senior specialist developer.**

Sincerely,

Drew Rath
