Software Engineer, Test Cover Letter

6709 Nolan OvalSouth Kina, PA 56306

Dear Peyton Turcotte,

In response to your job posting for software engineer, test, I am including this letter and my resume for your review.

Previously, I was responsible for services Oriented Architecture (SOA) that includes governance issues as well as software deployments.

Please consider my experience and qualifications for this position:

- Be able to reports status, progress and concerns in a proactive, consistent and accurate manner to management
- Be able to mentor and manage testing activities in a distributed team
- Testing experience in analytic or business intelligence, web services, Services Oriented Architectures, and enterprise scale applications
- Work experience using software configuration management systems like SVN, GIT etc…
- Experience with wireless/wired traffic generator and simulation tools such as VeriWave, Chariot, Spirent, Ixia, controller/AP simulator
- Able and willing to quickly learn new technologies and master them
- Commercial software testing experience
- Experience with requirements and defect tracking systems

Thank you in advance for taking the time to read my cover letter and to review my resume.

Sincerely,

Royal Wisoky
