

Test Developer Cover Letter

35950 Wintheiser TunnelNew Cherryl, MT 70417

Dear Jordan Frami,

Please consider me for the test developer opportunity. I am including my resume that lists my qualifications and experience.

In my previous role, I was responsible for enhanced support and build CI/CD services for applications hosted on Windows and Linux, using Ansible and UDeploy; and developing scripts and applications to automate repetitive tasks and anticipate and provide solutions to program needs, using Python and Shell Scripting.

My experience is an excellent fit for the list of requirements in this job:

- Product testing background
- Bamboo, Jenkins, or other CI type system
- Amazon AWS deployment and testing
- Development using a C++, C#, or Java based language
- Experience developing test automation on manufacturing lines
- Strong knowledge of testing methodologies, tools, and processes
- Experience with continuous integration tools such as Jenkins and bugtracking tools like Bugzilla
- Experience with C++ programming and Unix system administration is preferred

Thank you in advance for taking the time to read my cover letter and to review my resume.

Sincerely,

Drew Grady
