

UI / UX Cover Letter

3197 Monahan Mountain Rodport, IN 33207-0663

Dear Morgan Quitzon,

In response to your job posting for UI / UX, I am including this letter and my resume for your review.

Previously, I was responsible for software engineering and customization including, but not limited to: user experience and user interface design, workflow administration, report setup, data imports, integration, scripting, third party software integrations, and custom application development.

My experience is an excellent fit for the list of requirements in this job:

- Working knowledge of GIT or an equivalent
- Proven experience in development lifecycle processes and best practices
- Experience with legacy systems and platforms very useful
- Knowledge of common browser incompatibilities and quirks
- Work with Business Analysts, Web Designers, Developers, and Testers to ensure that user experience issues are a focus from project initiation through post-delivery
- Maintain best practice knowledge of user experience issues and trends
- Analyze available Enterprise Portal usage metrics for trends, patterns, issues, and opportunities for UX optimization
- Visiting, seeking out views, listening and talking with other team members

Thank you for considering me to become a member of your team.

Sincerely,

Tyler Heller
