

User Acceptance Testing Cover Letter

1595 Dach ParkWest Tyisha, SD 57260

Dear Frankie Batz,

I submit this application to express my sincere interest in the user acceptance testing position.

In the previous role, I was responsible for business support expertise and manages stakeholder groups in support of requirements delivery efforts to identify, interpret and produce business requirements deliverables based on enterprise architecture landscape.

I reviewed the requirements of the job opening and I believe my candidacy is an excellent fit for this position. Some of the key requirements that I have extensive experience with include:

- Provide infrastructure support for the UAT team in the lower environments
- Collaborate with IT to find new methods and processes that eliminate inefficiencies in the lower environment release process
- Proactively identify technical obstacles that impact UAT and the project teams and work with stakeholders to determine options and solutions
- Establish processes for ongoing standard configuration activities
- Lead tester for the data warehouse project, which requires query logic automation processes
- Lead tester for technical debt initiatives that focus on infrastructure changes
- Serve as game install admin for projects that require in-game testing and data creation
- Knowledge of infrastructure-API/Database mapping as it translates to business use cases

Thank you for considering me to become a member of your team.

Sincerely,

Briar Borer
