Our company is growing rapidly and is looking for a business analyst SAP. Thank you in advance for taking a look at the list of responsibilities and qualifications. We look forward to reviewing your resume.

## Responsibilities for business analyst SAP

- Quickly understand business needs and translate that understanding into a form that leads to the creation and/or composition of better process, organizational and/or technology solutions in line with best practices and standards
- Learn the ins and outs of the existing solutions and identify potential improvement opportunities for system integrations
- Responsible for the configuration and ownership of Love's implementation for their functional area (FICO, PS and BPC)
- Elicit and effectively communicate internal and external customer requirements for system and process changes
- Analyze and document as-is process and complete supporting documentation, including process diagrams
- Establish process performance measurements to be able to constantly monitor, control and report end-to-end process performance
- Contribute to process community
- Define, document and communicate future state solutions
- Perform feasibility studies/solution reviews and make appropriate recommendations
- Understand and ensure that quality standards are met

## Qualifications for business analyst SAP

- Sound understanding of the integration with SD and MM modules

- Comprehensive understanding of SAP master data elements, data mapping and data conversion is necessary, and the ability to read and interpret process flow documentation and translate this into configuration and customization requirements is also required
- Ability to test programming and interfaces, and debug programs is also required
- The ability to identify the impact of process or data changes across more than one functional area or SAP module is necessary
- Must work independently on multiple concurrent projects, and in supporting problem tickets by working with end users, subject matter experts, and Business Process Architects to gather requirements, present solutions and lead in the selection of the best solutions
