Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our company is growing rapidly and is looking to fill the role of business systems analyst. If you are looking for an exciting place to work, please take a look at the list of qualifications below.

## Responsibilities for business systems analyst

- Engage in occasional troubleshooting and issue identification, and interface with our vendor partner's technical support for resolution
- Provide specialist expertise and practical assistance in the investigation, evaluation and interpretation of data
- Update inputs to the pricing model on a periodic basis or as circumstances require
- Provide support for senior management as they make decisions regarding potential pricing activity
- Carry out continuous improvement of the tool working with our vendor partner and developers as required
- Train employees as needed on navigation and best practices within the pricing toolkit
- Elicits and documents business requirements using interviews, workshops, and/or existing systems documentation or procedures
- Develops user acceptance test plans and test scenarios and manages the execution of UAT
- Manages requirements and functional design through entire lifecycle - tracks and fully documents changes for functional and business specifications
- Leads and conducts definition, documentation, testing, training, implementation, and support of system requirements on assigned projects

## Qualifications for business systems analyst

- Proficiency to synthesize and clearly present large amounts of complex data
- Ability to work independently with minimal supervision and to manage conflicting priorities
- A keen understanding of process and the aptitude to implement improvements
- 5+ years of experience in business process engineering, or business system analysis with a Bachelor's degree in IT
- Proven experience in both systems development life cycle and in a fast paced agile environment
