

# Example of Care Engineer Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our company is growing rapidly and is searching for experienced candidates for the position of care engineer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

## Responsibilities for care engineer

- Negotiate/design programs with suppliers that will ensure an adequate Preventive Maintenance and Spare Parts Program for each mold assigned
- Analyze plastic part quality problems as required and determine root cause traceable to mold conditions
- Basic understanding of GMP/QSR/ISO-13485
- Basic understanding of Corrective Action and Preventive Action Systems
- Make recommendations regarding facilities, equipment, personnel, procedures, and systems, to assure conformance to (supplier or internal) quality standards
- Assist in the Design, development, or improvement of new or existing products or components
- Assist in planning, design, and development or test requirements and any special testing equipment to establish product specification
- Testing and Performance Protocols
- Mold Construction, Repairs, Troubleshooting
- DFM & Product design for molding

## Qualifications for care engineer

- Experience on purchasing processes, should cost models, RFQ's, MOU's and sourcing boards preferred
- Experience in product design & development 2-4 years

- A minimum of four years of experience in a regulated, electronics manufacturing environment is required
- Familiarity with ERP systems, JDE or similar
- 2-5 years relevant work experience supporting customers in a technical environment preferred OR commensurate college-level coursework, or a combination of both
