

Example of Computer Scientist Job Description

Powered by www.VelvetJobs.com

Our company is looking to fill the role of computer scientist. Thank you in advance for taking a look at the list of responsibilities and qualifications. We look forward to reviewing your resume.

Responsibilities for computer scientist

- Perform rigorous software verification/validation and document results
- Conduct research and development in PDES methods and applications, including the design and implement of innovative PDES methods and algorithms
- Document research results and development progress by publishing papers in technical reports, peer-reviewed conferences and journals
- Direct the preparation of proposals, including negotiating with sponsors, defining scope, setting milestones, deliverables and schedules, and planning staffing and budgets
- Consult with application area experts to architect high-performance simulation models in novel areas
- Mentor other staff by guiding and providing scientific and technical direction
- Set a broad vision and strategy for future research directions
- Present research to senior management, external sponsors and potential customers
- Build algorithms to address program and sponsor data sciences requirements
- Collaborate with developers, often representing the organization as the primary technical contact, sharing relevant knowledge, opinions, and recommendations, to fulfill deliverables as a team

Qualifications for computer scientist

- Ability to demonstrated entrepreneurial thinking, innovation, and real-world

- Knowledge of signal analysis, 2D and 3D imaging physics, multi-view geometry, image processing, and collection devices and software
- Minimum of 7 years with software development lifecycle experience
- Understanding of common embedded processor architectures and programming experience in assembly on those architectures (MIPS, PowerPC, or ARM)
- Assist Government Sponsors in transformation to effective cloud computing architectures
