

# Example of Database Designer Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our company is growing rapidly and is looking for a database designer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

## Responsibilities for database designer

- Other tasks outlined by development manager
- Collaborate with product managers on requirements for manipulating data to support key features for new and existing products within the EBSCOhost environment
- Write detailed technical database design specifications that describe how to map bibliographic data sources to EBSCO's proprietary format
- Use ETL tools to carry out the instructions in design specifications
- Work with team members including QA, PM on product configurations and complex data transformations to ensure accurate technical implementation of database functionality and appearance according to specifications
- Provide troubleshooting and defect resolution for existing products
- Contribute to discussions about metadata standards
- For licensed secondary databases (LSDs), design and build databases from start to finish
- Identify opportunities for process improvement and drive process improvement projects from beginning to end
- Lead the design of useful, usable, and desirable products in a team environment

## Qualifications for database designer

- Good knowledge of DBs (MySQL, Microsoft SQL Server, or equivalent)

- 7+ Years of experience in logical and physical database modeling concepts, both transactional and non-transactional
- Experience creating logical entities and defining their attributes defining the relationships between various objects
- Experience working with load test/monitoring tools to tune and optimize Oracle databases
- Experience with test and deployment automation at the database tier
