

Example of Developer, BI Job Description

Powered by www.VelvetJobs.com

Our company is looking for a developer, BI. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for developer, BI

- Display a working knowledge of Database Management Systems, including both legacy DBMS's and relational/SQL DBMS's
- Stay abreast of technology trends and industry best practices to hone and maintain talent
- Analyze current manual processes to identify areas of continuous improvement and increased efficiency opportunities
- Proactively highlight/analyze issues and raise awareness to the Engineering team and feed into Product Management for remediation
- Function as SME for BI/UI best practices, maintaining standards and researching usability trends
- Collaborate with data and business analysts to craft insight-driven dashboard designs
- Experience in the design and development of BI visualizations in a revenue management environment, preferably with healthcare background
- Participate in product design sessions and create low fidelity prototypes to demonstrate concepts to business stakeholders
- Produce creative front-end dashboards and reports based on business requirements and user stories
- Pay attention to detail in the visualizations and support data analysis in evaluation and implementation of dashboard performance goals

Qualifications for developer, BI

- Knowledge of ETL technologies
- Experience with data flow automation (PowerShell/C#)
- Familiarity with best data engineering practices (source control, code reusability, data quality)
- SSAS Tabular and DAX
- Minimum Bachelor degree in Computer Science, Business Analytics or Engineering
