Our growing company is looking to fill the role of devops engineer, senior. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for devops engineer, senior

- Full system view of the delivery and operations approach and the avoidance of waste and defect propagation
- Amplify feedback loops - and increase the frequency - through the automation
- Enable experimentation within the development lifecycle to validate enhancements and improvements whilst mitigating risk
- Ensure fitness of purpose of the development lifecycle to meet business and operability requirements
- To ensure collaboration takes place between the correct parties (e.g., business, operations, risk, CISO, etc) at the right time to engineer in quality at source rather than in retrospect
- To provide thought leadership on DLGs chosen toolchain
- Work within project delivery teams to own the SDLC approach to meet DLG requirements through in to production and operation
- Maintain improvement plans to the SDLC aligned with business priorities
- Design and develop feedback loops for project delivery
- Ensure broader understanding of DevOps in the organisation and how the organisation can adopt alternative ways of working (behavioural and not just technical)

Qualifications for devops engineer, senior

- Experience in in LAMP stack, DevOps and automation environment (Ansible, CLI scripts)
- Experience in SVN or CVS is required
- Expertise in SDLC/SCM (Software Configuration Management) methodologies and release management processes
- Expertise in automating Configuration Management, Build Management, and Release Engineer processes
- Expertise in administrating, configuring and developing build and release tools like VS, MSBuild, ANT, NANT, Cruise Control, Jenkins
