

Example of DevOps Lead Job Description

Powered by www.VelvetJobs.com

Our company is looking to fill the role of devops lead. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for devops lead

- Champion operational readiness from the planning phase through to completion
- Provide focused guidance and coaching to other team members, including providing clarity regarding day to day tasks, ensuring analysts have the right climate in which to succeed
- Responsible for ownership and manage all involved parties and responsible for (managed) product operations in terms of developing, configuration, changes, implementation, rollout and preparation for all operated services including on call duties
- Accountable for executing or managing incident, problem and service request including implementation of workarounds and changes
- Accountable to identify and implement best practise and process improvements with 3rd parties delivering operational and deployment services to GDC
- Define and drive the implementation of technical KPI reports to deliver indicators for service improvements
- Accountable to increase quality by supporting technical and commercial service improvements
- You will take a major role in roadmap definition and implementation of our CI/CD pipelines, including technologies and methodologies selection
- You will manage a team of two DevOps experts
- You will design, develop and productize automation processes for installing

Qualifications for devops lead

- Proficiency in networking
- Solid knowledge of best practices, processes and tools required to support a successful CI/CD system
- Experience in coordinate small team (5-7 members)
- Manage current unautomated deployments
- Linux sys admin background
- Good understanding of networking concepts (load balancers, routers) System Admin
