

# Example of Driver Engineer Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our growing company is hiring for a driver engineer. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

## Responsibilities for driver engineer

- Produce design and associated drawings for current and future projects according to timelines
- Designing components/systems with a holistic approach – considering surrounding components
- Conduct detailed design review with systems engineering, component engineering, and packaging engineers to insure the components/systems meet the system level design intent
- Conduct quality assurance reviews such as FMEA's, A3's and Risk Assessments
- Manage internal and external suppliers to ensure components/systems are manufactured correctly in the required time based on project management needs and production timing, whilst meeting the relevant/required standards
- Provide technical support related to Driver Environment components to other departments and the assembly plants
- Resolve project and factory fault reports related to Driver Environment designs by identifying root cause and corrective actions required
- Software specific Product Definition
- Development process, methodology, and infrastructure
- Deployment process

## Qualifications for driver engineer

- Experience with hardware in the loop/software in the loop testing environments
- Passionate about electrical/electronic systems, new technologies, and cars
- Have solid technical breadth in electrical and software engineering
- Familiarity with electromagnetic fields and waves, computer vision, sensor fusion, and vehicle control concepts is a plus
