

Example of Electrical Job Description

Powered by www.VelvetJobs.com

Our company is growing rapidly and is searching for experienced candidates for the position of electrical. Thank you in advance for taking a look at the list of responsibilities and qualifications. We look forward to reviewing your resume.

Responsibilities for electrical

- Become familiar with electronics design software and tools selected by the CoE to performs circuit design, circuit simulation, thermal, reliability, and maintainability analyses to verify compliance with design requirements
- Help CoE develop, deploy and continually improve new processes and design practices to satisfy industry standards for electrical hardware design and implementation
- Maintain current electrical engineering skills and knowledge through participation in training, conferences and reading trade magazines
- Maintaining the stability of line equipment electrical systems and controls
- Review, improve all electrical rules and guidelines for the area assigned
- Learns from and coordinates with engineering leads to develop electronics specifications, requirements and other required documentation Works closely with sales personnel and customers to help define end use requirements when requirements are not clearly defined by customer
- Develop hardware, design and implementation to meet the performance, weight, cost, and schedule requirements
- Selects components, materials, processes, and configurations required to meet design intent
- Supports supply chain and operations with electronic component obsolescence issues
- Develops and prepares procedures for and performs/supervises design verification and validation testing to verify design compliance with required performance

-
- Minimum of 3 months of experience with embedded systems design and programming and product development
 - Minimum of 3 months of experience using CAD layout and circuit design
 - Minimum of 3 months of experience with developing circuits involving energy harvesting, sensory instrumentation, and wireless transmission of data
 - Minimum 4+ years' experience and/or proven ability to work in a fast-paced, schedule-driven environment
 - Appropriate project management skills necessary to effectively engage with PCA part vendors and partners for key technology development and successful implementation
 - Ability to work across team boundaries to develop innovative solutions
