Our growing company is looking to fill the role of front-end developer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for front-end developer

- Capturing build and deployment notes, developing software product deployment & operating instructions
- Checking the consistency of documents with the respective software product release, referencing packages to the Configuration Management Database (CMDB) and ensuring the availability of the CIs within the Definitive Software Library (DSL)
- Supporting the creation of software product training material, software product user guides and software product deployment instructions
- Managing the maintenance of applications and performing technical change requests, scheduled according to release management processes
- Customising packaged software (i.e., out of the box software)
- Developing responsive web design experiences by collaborating with the design and back-end development teams
- Updating and changing the website and deal with bug fixes as necessary
- Making implementation decisions along with the client and design teams
- Cross browser testing of new features
- Collaborating with other developers using Git and JIRA

Qualifications for front-end developer

- Expert-level knowledge of website development process and programming including HTML, XML, javascript, jquery, and CSS

- Advanced knowledge of software design and development experience in commercial large scale, multiplatform environments
- Experience with current Web development technologies HTML5, CSS3, javascript – angular preferred
- Ability to pick up new technologies quickly and work within a distributed team environment
