Our company is growing rapidly and is hiring for a front end engineer. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for front end engineer

- Implementing a front end for web applications with HTML/CSS/JavaScript according to demands from designers and planners
- Work closely with product and design teams to build interfaces in Angular
- Work with our backend services team to ensure a cohesive end product
- Build and improve customer facing software systems for a fast-growing, disruptive e-commerce company
- Work with APIs to integrate with backend and 3rd party systems
- Passionate about high quality front end applications
- Knowledgeable regarding Agile (scrum) based delivery practices, test driven development, test automation and continuous delivery
- Knowledge of a variety of software design patterns, such as factory, observer, module, pubsub, closure, async, promises
- Assisting in providing technology-enabled solutions to clients
- Assisting in modifying existing software to correct errors, to adapt it to new hardware or to upgrade interfaces and improve performance

Qualifications for front end engineer

- Serious knowledge and understanding of JavaScript (jQuery plugins are awesome, but you should be able to write your own, too)
- Comfortable working in a Unix environment (you don't have to be a l337 hax0r, but a terminal should be your friend)

each other improve)

- Keeps up with evolving web standards and best practices (we're constantly looking at new tech to build even better UX)
- Experienced with at least one JS framework (React, Backbone,) combined with the capability to write beautiful code independently of these
- Dev experience within a dynamic web environment (PHP, Python, Node.JS)
