Our company is searching for experienced candidates for the position of front end engineer. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for front end engineer

- Work on significant portions of critical work and/or complex web projects
- A passion for high quality front end applications
- Comprehensive understanding of frontend architecture
- Expert knowledge of CSS3, semantic HTML and responsive UIs
- Brief daily meeting to sync with small cross-functional team (scrum)
- Go off and crank on your project, checking in with other team members throughout the day with questions and updates
- You leave the code in a better state than when you found it (progressive refactor)
- Write comprehensive tests of functionality, and ensure that they pass
- Work closely with product leads, designers, project managers and back-end engineers to implement versatile front-end solutions to complex web development problems
- Optimize our web products to maximize speed and scale

Qualifications for front end engineer

- Good understanding of JSTL and JSP
- 2+ years of experience developing data-driven web applications
- Comfortable coding in vanilla JavaScript (ES6/ES2015)
- Experience with front-end performance optimization techniques
- Knowledge of HTML5 (new semantics and JavaScript APIs, CSS3)
