Our company is growing rapidly and is looking for an IOS engineer. To join our growing team, please review the list of responsibilities and qualifications.

## Responsibilities for IOS engineer

- Build cutting edge iOS apps
- Write clear, maintainable code that will scale across a number of projects and distributed development teams
- Build, release, and support features for Epicurious
- Work closely with Product and Design teams
- Craft a developer experience for our platform that is smooth and elegant
- Contribute to open source and help us maintain our own open source projects
- More senior engineers will act as a role model and mentor to more junior members
- You will monitor the performance of the live apps and continuously improve them on both code and experience level
- Drive engineering projects to completion, with a tenacious focus on the business impact of those projects
- Build and test client software with complex server, network and hardware interactions

## Qualifications for IOS engineer

- Ideally, you've made contributions to apps in the App Store
- 3+ years build, release and automation experience
- Familiarity with Jenkins, git, rake, gerrit, Xcode, xcodebuild, Clang
- A minimum of 6 years of hands-on professional development experience with Objective-C and iOS
