

Example of IT Security Manager Job Description

Powered by www.VelvetJobs.com

Our innovative and growing company is looking to fill the role of IT security manager. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for IT security manager

- Performing complex operating system and network security investigations
- Performing and reviewing vulnerability evaluations of software and hardware such as workstations, servers and network devices
- Providing technical resolution for complex system issues and root cause analysis on security events and incidents
- Managing the security operations team
- Reviews security features of new systems, ensuring they meet existing security requirements and policies
- Develops an Information Security Awareness program
- Provide strategic direction to track managers
- Evaluates and defines client requirements for IT risk & security projects
- Defines scope and estimates project costs and details
- Directs engagements by managing junior staff or contractors to meet project commitments

Qualifications for IT security manager

- Additional experience beyond 8 years may be substituted for a degree
- Management training or experience
- At least 7 years of progressive working experience in Information Security or a related discipline such as Infrastructure security or Network security
- Have experience investigating and leading a Cyber Incident Response team

- Knowledge of core networking technologies such as TCP/IP, DNS, and DHCP
- CISSP or other security certifications such as ones from GIAC
