

# Example of Middleware Engineer Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our company is growing rapidly and is hiring for a middleware engineer. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

## Responsibilities for middleware engineer

- Install, upgrade, migrate and maintain middleware software, applications, and websites in development, test, and production environments
- Provide on call, 24x7 support for production middleware systems on a rotating basis with other middleware engineers
- Maintain and test middleware backup and recovery procedures and scripts to insure system recoverability
- As a member of the Morpheme Connect team you will be working to continue to develop middleware that is recognised as industry leading technology
- What your first week will look like
- By the end of month one
- By month three
- At the end of your 6th month
- A year in
- You know your way around C++ or C#, enough that you could write tools and fix bugs

## Qualifications for middleware engineer

- Understanding and relevant experience of the full project lifecycle and key quality gates with emphasis on Design, Test and validation and Live implementation phases

- Good appreciation of ITIL disciplines of Incident, Problem, Change and Configuration Management
- Hands on with technologies such as C, C++, Java, XML, HTML, SOAP, SOAP UI
- Experience with continuous delivery processes desirable
- Must be comfortable in a dynamic environment with multiple technology stack and ability to wear multiple hats between requirements gathering, estimations and development
