

Example of .NET / SQL Job Description

Powered by www.VelvetJobs.com

Our company is looking for a .NET / SQL. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

Responsibilities for .NET / SQL

- Write and maintain user interfaces and reporting tools around the database solutions (.NET C#, ASP.NET)
- Suggest and implement optimizations in existing data applications
- Support the team during campaign execution and data mining
- Write technical specs for simple, moderate and complex programming assignments
- Deliver quality solutions on time and actively inform project managers about the project status
- Design, develop, test and debug new software in a C# .Net programming environment, under minimal direction
- Participate in system architecture and design
- Assist with the development of interfaces within the enterprise tier using middleware tools
- Integrate with third-party systems by building web services, providers, and designing APIs
- Write clean, well-organized code, following industry standard coding practices (SOLID) and security guidelines (OWASP)

Qualifications for .NET / SQL

- BI Systems (Cognos, Salesforce, SSRS)
- 6 month rolling contract

- Strong data analysis skills, including the ability to translate and summarize complex customer, product and process information into understandable, actionable reports and recommendations
- Experience in customer migrations and change management processes
- Experience in identifying and documenting requirements for both internal/external communications and generating mail files
