

# Example of Network Cyber Security Job Description

Powered by [www.VelvetJobs.com](http://www.VelvetJobs.com)

Our innovative and growing company is looking to fill the role of network cyber security. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience.

## Responsibilities for network cyber security

- Document security on both new and fielded information systems and/or provide accreditation/certification evaluation and test support to ensure all technical security features are considered and functioning properly
- Assist in the engineering and configuration of network firewalls, proxies, endpoint protection suites, and content filters
- Audit and provide technical knowledge regarding network firewalls, content filters, routers, and other network equipment
- Assist the Network Engineer with issues on the network and be hands-on
- Gather Group and regional requirements
- Research and aid in the selection of new technologies
- Plan, design and implement new and existing technologies globally
- Own platforms and be the global subject matter expert
- Work with third-parties to ensure toolsets are meeting their potential and remediate issues
- Respond to tickets and incidents from the Global Security Operations Centre

## Qualifications for network cyber security

- Understanding of email protocols from operational and functional perspectives
- Planning, design, and installation of network devices to support architecture designs, strategies and compliance

- Bachelor's degree in Computer Science or a related field, and a minimum of 9 years related experience
- Bachelor's degree with at least 2 years of experience in coordinating cybersecurity network migrations and related environment change efforts
- Experience in writing, coordinating and leading execution of runbooks
