Our innovative and growing company is looking to fill the role of network developer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for network developer

- Cultivate engineering excellence practices within the team and mentor associate developers
- Assist in establishing peering with partner networks at new interconnect facilities globally, and work closely with network operations teams to ensure that peering and transit connections are upgraded in a timely and effective manner
- Work with capacity planners and engineers to ensure the most efficient and cost effective network topology is delivered
- Make sure the developments are in line with business expectations (means active contributions to backlog refinement on a 2 weeks' sprint basis)
- A possibility to work with other industry's top talents and trend-setters who support you with your development and growth
- Global opportunities to develop your career
- Works with management to drive product strategy, development and implementation of VitalSource's API products for internal and external consumption
- Defines API specifications alongside engineering team based on API best practices to ensure consistency, scalability and performance of API products
- Performs data analyst skills looking at data to determine trends, problems and provide solutions
- Designs and implements Dev Network tutorials, documentation, sample code and support

- Ability to target communication appropriately across a wide spectrum of audiences, from implementers to executives
- Knowledge of HTML, CSS, and JS Framework
- TFS or other version control system
- Must be pursuing a degree from an accredited university in a related field
- Must be an excellent communicator, prompt and coachable
- Must be detail oriented, organized, and able to meet deadlines
