

Example of Node JS Job Description

Powered by www.VelvetJobs.com

Our growing company is hiring for a node JS. To join our growing team, please review the list of responsibilities and qualifications.

Responsibilities for node JS

- Be able to own the delivery of moderately complex solutions from design through acceptance and into production
- Continually work with colleagues to improve the tools, technologies and processes used by the team
- Ensure solutions are documented to a suitable level
- Work with product owners to gain delivery acceptance
- Actively propose enhancements, both technical and functional that will move the systems forwards
- Partner with the rest of the team to ensure that processes are adhered to
- Participate in estimation to ensure that no-one is asked to deliver in an unrealistic timescale
- Ask for clarification of anything that is not clear
- Ensure security concerns are built into all of the solutions they work upon

Qualifications for node JS

- Can articulate technical solutions and work with architects and developers to create an efficient and effective application design
- Acts as the interface between the systems and the technical support areas when additional technical support is required
- Have extensive experience and ability to facilitate application design/development process
- Worked in SAFe and TDD practices
- Experience with JDK 1.6 or higher
