

Example of Performance Architect Job Description

Powered by www.VelvetJobs.com

Our company is growing rapidly and is looking for a performance architect. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for performance architect

- Track and document status and time spent on customer trials
- Review and assess the technical quality of customer trials
- Working closely with R&D and Product Management to be closely involved with future product direction and strategy - providing valuable input from "the field."
- Be ready to become one of the EPM Cloud solution focus leaders
- Act as a trusted advisor to customers
- Work Closely with Sales Team to assist in the EPM Projects Sales Cycle
- Work to Produce Consulting Services opportunities
- Take full accountability for the solution and delivery of EPM implementations
- Follow the customers satisfaction and any further assistance after the go-live phase of your projects
- Subsystem model configurations

Qualifications for performance architect

- Advanced knowledge of Hyperion Financial Management / HFM (business rules, integration)
- 4+ years experience of scripting experience in perl/shell/python/java or similar languages
- Good interpersonal communication and customer service skills are needed
- Or equivalent experience is required

- Strong interpersonal, facilitation, team building and leadership skills along with effective communication (both written and verbal) skills and the ability to present complex ideas in a clear, concise way
