Our company is searching for experienced candidates for the position of platform development. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for platform development

- Identify, develop, and sustain metadata, lineage, and governance strategy for data residing on the platform
- Develop and maintain platform strategy through partnerships with architects and engineers
- Work closely with R&D business users, data engineers, data scientists, to identify next generation platform requirements
- Management experience running a critical infrastructure team(s)
- Experience with development or large-scale production of the Hadoop ecosystem
- Passionate enthusiasm for empowering others to using data to improve processes and products
- Fearless approach to problem-solving and striving for the best solution
- Strong sense of engineering / infrastructure tradeoffs and delivering mitigating strategies
- Assume responsibility for the overall systems development lifecycle
- Partner with other members of the stakeholder group to develop the long-term strategy for the program and translate that into an achievable technical roadmap/action plan

Qualifications for platform development

- Good understanding of object-oriented analysis, programming, and design

- Proficiency in the use of real-time operating systems (RTOS), field programmable gate arrays (FPGA), microcontrollers, and digital signal processors (DSP)
- Fluent command of English and solid understanding of German, both written and spoken
- Education-B.S.-Computer Science or Business Administration
- Previous experience managing shared services or libraries across cross-functional teams
