Our innovative and growing company is looking for a principal. To join our growing team, please review the list of responsibilities and qualifications.

Responsibilities for principal

- Technical bridge between Process Development and site based Technical Operations groups to support technology transfer, process validation, control strategy, process knowledge and ownership
- Develop, execute and measure multi-platform workplace communication campaigns—that leverage the Intranet, in-office digital displays, internal social media and video to drive two-way communication and prompt action
- We want to help business stakeholders become more effective in their day-to-day communications by developing and driving a DIY model.We measure and analyze everything
- Liaison with clients including discussing technical solutions with technical and non-technical clients at both project and tender stage
- Undertake CRE role in the delivery of civil engineering elements of single and multi-disciplinary railway projects
- Provide technical leadership to a development team across full SDLC and application stack
- Hands on delivery of working components as part of a team
- Development of technical specifications based on functional requirements
- Working closely with product and architecture teams to define the technical roadmap required for solution delivery in line with our strategic plan for application decomposition to micro-services
- Ensuring adherence for the team to coding standards and key quality metrics such as unit and automated testing

Qualifications for principal

- Bachelors of Science Degree in Engineering with a minimum of 7 years of experience, or a minimum of 5 years of experience with a Master's Degree
- Professional traits, including an uncompromising commitment to quality
- You have 8+ years experience in client-facing roles of increasing responsibility, delivering products or services to life science partners, in organizations such as top 5 consulting firms, boutique life sciences consulting firms, or healthcare IT/analytics companies
- You have a track record of success in developing long term business relationships with life science companies in a strategic and abstract space
- You can apply your commercial or medical oncology content knowledge to support end-to-end client engagement process, including capabilities presentations, project scoping, and customer support
