Our innovative and growing company is searching for experienced candidates for the position of project manager systems. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent.

Responsibilities for project manager systems

- Develop and maintain robust Project Plans that meet the customer and business objectives
- Responsible for project risk management processes and developing and implementing project controls processes and tools
- Coordinate cross-functional, cross business global activities and drive project adherence, ensuring flawless execution of priorities throughout the Project lifecycle
- Manage the project budget and timeline and ensure the resources are available to complete the project within budget and on time to meet customer obligations
- Own and deliver risk management plans
- Ensure Lessons Learned from project execution are shared within the team
- Deliver programmes within the management framework and governance process to engage key stakeholders and assure delivery
- Manage the delivery of programmes and component projects to agreed scope, timescale, quality, budget and customer satisfaction
- Align programme objectives to the Group Strategy providing a clear line of sight for the team
- Create the programme organisation and manage the project team(s) (co-ordinating resource from Business Systems, the wider business and third-parties)

- Ability to foster collaboration, communicate and influence
- Strong analytical skills, technical aptitude and attention to detail
- Experience with Saleforce implementation
- Excellent and diverse communication and project management abilities
- Interest in the SaaS/CRM/Collaboration industry and an appreciation for Quip's approach to the market
- 5+ years of Information System project management experience in technical product development and the full product lifecycle
